Professional Profile

Physics graduate specializing in Electronics, currently pursuing computer science training at 1337, part of the 42 Network. I have an interdisciplinary background combining electronics, computer science, and software development.

My academic background has provided me with knowledge of analog and digital electronics, signal processing, power electronics, automatic control, and electronic systems. Through my training at 1337, I am developing skills in C/C++ programming, Linux systems, computer networking, algorithms, and client-server development.

I am particularly interested in embedded systems, microcontrollers, industrial automation, robotics, software development, and digital technologies. I also have interests and skills in photography, graphic design, and visual content creation.

Technical Skills

Programming and Software Development

C, C++, JavaScript, React, Vite, Node.js, NestJS, HTML, CSS, REST APIs, Algorithms, Data Structures, System Programming.

Operating Systems and IT Tools

Linux, Shell, Computer Networking, Git, GitHub, Docker, Client-Server Architecture, Development Environments.

Electronics and Engineering

Analog Electronics, Digital Electronics, Power Electronics, Signal Processing, Automatic Control, Electronic Circuits, Three-Phase Systems, Transmission Systems, VHDL.

Engineering and Simulation Software

MATLAB, Proteus, Multisim, PSIM, ModelSim.

Creative Skills

Photography, Graphic Design, Visual Composition, Visual Content Creation, Creativity, Attention to Detail.

Education

Bachelor's Degree in Physics – Electronics **Bac+3**

- Analog and digital electronics.
- Power electronics and three-phase systems.
- Signal processing and transmission.
- Automatic control and control systems.
- Electronic circuits and systems.

1337 – 42 Network Coding School **2024 – Present**

- C/C++ programming, algorithms, and data structures.
- System programming and Linux environments.
- Computer networks and client-server architecture.
- Web development and API integration.
- Version control with Git and collaborative development.

High School Diploma – Physical Sciences **2020**

Technical Projects

ft_transcendence – Full-Stack Web Application *Ongoing Project*

- Developing a web application using React and Vite.
- Designing a responsive Single Page Application (SPA).
- Integrating the frontend with a backend API.
- Working with Node.js, NestJS, Docker, and Linux.
- Collaborating within a team and managing code using Git.

Programming Projects – 1337 / 42 Network

- Developing programs in C/C++ within Linux environments.
- System programming, process management, and memory handling.

- Network programming and client-server communication.
- Solving algorithmic problems and designing software solutions.

Areas of Interest

Embedded Systems, Microcontrollers, Industrial Automation, Robotics, Electronics, Internet of Things (IoT), Software Development, Computer Networks, Digital Technologies, Photography, Graphic Design, and Visual Creation.

Personal Strengths

Teamwork, Autonomy, Analytical Thinking, Problem Solving, Attention to Detail, Continuous Learning, and Adaptability.
